FOREWORD

This study was undertaken by the Institute of Agricultural and Food Policy Studies, Universiti Putra Malaysia (IKDPM, UPM) in collaboration with the Southeast Asia Marine Resources Institute (ISMAT) from 2016 to 2018. This pioneer study in Peninsular Malaysia explored the status and trends of shark and ray utilisation, marketing and trade as a follow up to study conducted in Sabah in 2015.

Since 2006, The government of Malaysia has implemented the National Plan of Action Shark (NPOA-Shark Plan 1) and NPOA-Shark Plan 2. The main purpose of both plans is to emphasize the need to protect and manage the shark and ray resources within the fisheries industry in the country while, at the same time, safeguarding the livelihood of the traditional fisheries sector. Although sharks and rays are not the targeted species, any decision made on the conservation and management would significantly affect the livelihood of traditional fishers.

As part of the strategic actions agreed upon in the NPOA-Shark Plan 2, the present study is aimed at collecting information on shark and ray marketing, as well as the impacts on socio-economics of traditional fishers in Pahang and Perak. The study thus fulfils the aim of shark and ray resources management as stipulated in the NPOA-Shark Plan 2, which is to develop appropriate policies to promote responsible shark and ray conservation and management for the future generations.

The study team would like to record their sincere thanks to the Department of Fisheries Malaysia (DOFM) for initiating this study. The help and collaboration from various agencies and individuals have been crucial in achieving the intended objectives of the study. In particular, we are indebted to the officers of DOFM and Fisheries Development Authority of Malaysia (FDAM) for their continuous support of the study. The ever willingness of the officials of DOFM at the districts of Kuantan and Rompin in Pahang and the districts of Kerian, Manjung, and Hilir Perak in Perak to facilitate our studies, either in terms of information or leads, are also highly appreciated. Without their support, it can be safely said that this study would not have been able to implement field interviews and visits to landing centres, as well as the discussions with the fishers and industry participants, all of whom are the targeted stakeholders of the study. The input of these stakeholders has served as the core data for the study.

The support of Universiti Putra Malaysia, particularly the Institute of Agricultural and Food Policy Studies, is highly appreciated. So are the hard work and contribution of Mr. Nor Azman Zakaria, Mr. Mohd Saki Noor, Mr. Wahab Daud, and the late Allahyarham Mr. Ruzelan Jusoh of ISMAT. The enormous support from the DOFM in Pahang and Perak are commendable indeed. Also, not to forget our thanks to all stakeholders including fishers, processors, wholesalers and retailers in Kuantan, Rompin, Lumut, Taiping, Ipoh, Batu Pahat, and Melaka for their involvement to aid us in completing this study. Most of all, it is the readiness and warmness of the fishers, processors, wholesalers and retailers in selected areas of Pahang and Perak whom have shared with us their experiences, insights and information that have touched us deeply, with great appreciation and admiration. Despite their struggle to earn a good income, their respect to the ocean and its content is remarkable and this deserves respect and appreciation. This report is dedicated to them.

The findings from this study would be useful as a guideline in expanding similar studies in other states in Malaysia.
FOREWORD

This study was undertaken by the Institute of Agricultural and Food Policy Studies, Universiti Putra Malaysia (IKDPM, UPM) in collaboration with the Southeast Asia Marine Resources Institute (ISMAT) from 2016 to 2018. This pioneer study in Peninsular Malaysia explored the status and trends of shark and ray utilisation, marketing and trade as a follow up to study conducted in Sabah in 2015.

Since 2006, The government of Malaysia has implemented the National Plan of Action Shark (NPOA-Shark Plan 1) and NPOA-Shark Plan 2. The main purpose of both plans is to emphasize the need to protect and manage the shark and ray resources within the fisheries industry in the country while, at the same time, safeguarding the livelihood of the traditional fisheries sector. Although sharks and rays are not the targeted species, any decision made on the conservation and management would significantly affect the livelihood of traditional fishers.

As part of the strategic actions agreed upon in the NPOA-Shark Plan 2, the present study is aimed at collecting information on shark and ray marketing as well as the impacts on socio-economics of traditional fishers in Pahang and Perak. The study thus fulfils the aim of shark and ray resources management as stipulated in the NPOA-Shark Plan 2, which is to develop appropriate policies to promote responsible shark and ray conservation and management for the future generations.

The study team would like to record their sincere thanks to the Department of Fisheries Malaysia (DOFM) for initiating this study. The help and collaboration from various agencies and individuals have been crucial in achieving the intended objectives of the study. In particular, we are indebted to the officers of DOFM and Fisheries Development Authority of Malaysia (FDAM) for their continuous support of the study. The ever willingness of the officials of DOFM at the districts of Kuantan and Rompin in Pahang and the districts of Kerian, Manjung, and Hilir Perak in Perak to facilitate our studies, either in terms of information or leads, are also highly appreciated. Without their support, it can be safely said that this study would not have been able to implement field interviews and visits to landing centres, as well as the discussions with the fishers and industry participants, all of whom are the targeted stakeholders of the study. The input of these stakeholders has served as the core data for the study.

The support of Universiti Putra Malaysia, particularly the Institute of Agricultural and Food Policy Studies, is highly appreciated. So are the hard work and contribution of Mr. Nor Azman Zakaria, Mr. Mohd Saki Noor, Mr. Wahab Daud, and the late Allahyarham Mr. Ruzelan Jusoh of ISMAT. The enormous support from the DOFM in Pahang and Perak are commendable indeed. Also, not to forget our thanks to all stakeholders including fishers, processors, wholesalers and retailers in Kuantan, Rompin, Lumut, Taiping, Ipoh, Batu Pahat, and Melaka for their involvement to aid us in completing this study. Most of all, it is the readiness and warmness of the fishers, processors, wholesalers and retailers in selected areas of Pahang and Perak whom have shared with us their experiences, insights and information that have touched us deeply, with great appreciation and admiration. Despite their struggle to earn a good income, their respect to the ocean and its content is remarkable and this deserves respect and appreciation. This report is dedicated to them.

The findings from this study would be useful as a guideline in expanding similar studies in other states in Malaysia.
EXECUTIVE SUMMARY

The study has been carried out in the state of Perak and Pahang in 2016 and 2017, as these two states are the major landings of shark and ray in the Peninsular Malaysia. Several steps including gathering information from recent and past studies related to catching of sharks and rays, obtaining information through focus group discussions (FGD) and key informant surveys (KIS) have been undertaken in Hilir Perak, Larut Matang, Manjung, and Kerian districts in Perak and Kuantan, Pekan and Rompin districts in Pahang. Face to face interviews have been carried out to collect the relevant data related to the traditional fishers. This includes socio-demographics and fishing activities, dependencies and views on conservation of shark and ray. The information which has been obtained through Focus Group Discussion (FGD) and Key Informant Survey (KIS) confirm that fishers in Perak and Pahang use four main gears to catch sharks and rays, which are trawlers, drift/gill nets, hook and lines, and longlines.

Information which are obtained through the FGD and KIS with the market players of shark and ray products at several major markets show that the marketing channels of shark and ray in the two states are localised (export and import are minimal) and efficient; all parts of shark and ray are mostly fully utilised. The main products traded consist of fresh meat, frozen meat, fresh fins, dried fins, skin of rays and cartilage of sharks.

The supply chain of shark and ray in Pahang is made up of three channels; the first channel, wholesalers at the FDAM Jetty in Kuantan buy fresh sharks and rays directly from the fishers and sell to the retailers in Kuantan as well as those from Batu Pahat, Johore Bahru, Melaka, Kuala Lumpur and Singapore. Some amounts are sold to the processors in Beserah, in which salted meat and dried products are processed for local consumption. Whereas, dried ray skins are exported to Thailand. The second channel, fishers at the FDAM Jetty in Kuantan sell their catches to wholesalers in Beserah and Balok, who then sell the products to retailers in Kuala Lumpur and Melaka. The third supply channel is made up of the wholesalers in Nenasi and Rompin who buy fresh sharks and rays from local fishers and sell to the wholesalers in Kuantan. The wholesalers in Nenasi and Rompin also sell the fresh sharks and rays to retailers in Mersing, Rompin, Batu Pahat and Johore Bahru in Johore and Seremban in Negeri Sembilan.

In Perak, there are three levels of supply chain; catches from fishers are bought by wholesalers at the jetty who then sell the products to retailers. The main jetties are at Hutan Melintang, Bagan Panchor and Pangkor. The main markets for the rays are outside of Perak such as Penang (Butterworth, Bukit Mertajam), Kedah (Alor Setar), Kuala Lumpur, and Johore (Johore Bahru) and some are exported to Singapore. Local retail markets in Perak include those in Sitiawan, Pantai Remis, Sungai Ular, Kampung Aceh, Telok Intan and Taiping. Rays are more popular in Perak compared to sharks. Most rays are sold in fresh form. Some amounts of ray are processed into dried salted meat.

It is evident that fishers who catch sharks do not practice finning; fishers bring back the whole bodied sharks to the jetties. The prices of fresh sharks and rays and processed products are highly depending on supply and demand, as well as the type of species.
EXECUTIVE SUMMARY

The study has been carried out in the state of Perak and Pahang in 2016 and 2017, as these two states are the major landings of shark and ray in the Peninsular Malaysia. Several steps including gathering information from recent and past studies related to catching of sharks and rays, obtaining information through focus group discussions (FGD) and key informant surveys (KIS) have been undertaken in Hilir Perak, Larut Matang, Manjung, and Kerian districts in Perak and Kuantan, Pekan and Rompin districts in Pahang. Face to face interviews have been carried out to collect the relevant data related to the traditional fishers. This includes socio-demographics and fishing activities, dependencies and views on conservation of shark and ray. The information which has been obtained through Focus Group Discussion (FGD) and Key Informant Survey (KIS) confirm that fishers in Perak and Pahang use four main gears to catch sharks and rays, which are trawlers, drift/gill nets, hook and lines, and longlines.

Information which are obtained through the FGD and KIS with the market players of shark and ray products at several major markets show that the marketing channels of shark and ray in the two states are localised (export and import are minimal) and efficient; all parts of shark and ray are mostly fully utilised. The main products traded consist of fresh meat, frozen meat, fresh fins, dried fins, skin of rays and cartilage of sharks.

The supply chain of shark and ray in Pahang is made up of three channels; the first channel, wholesalers at the FDAM Jetty in Kuantan buy fresh sharks and rays directly from the fishers and sell to the retailers in Kuantan as well as those from Batu Pahat, Johore Bahru, Melaka, Kuala Lumpur and Singapore. Some amounts are sold to the processors in Beserah, in which salted meat and dried products are processed for local consumption. Whereas, dried ray skins are exported to Thailand. The second channel, fishers at the FDAM Jetty in Kuantan sell their catches to wholesalers in Beserah and Balok, who then sell the products to retailers in Kuala Lumpur and Melaka. The third supply channel is made up of the wholesalers in Nenasi and Rompin who buy fresh sharks and rays from local fishers and sell to the wholesalers in Kuantan. The wholesalers in Nenasi and Rompin also sell the fresh sharks and rays to retailers in Mersing, Rompin, Batu Pahat and Johore Bahru in Johore and Seremban in Negeri Sembilan.

In Perak, there are three levels of supply chain; catches from fishers are bought by wholesalers at the jetty who then sell the products to retailers. The main jetties are at Hutan Melintang, Bagan Panchor and Pangkor. The main markets for the rays are outside of Perak such as Penang (Butterworth, Bukit Mertajam), Kedah (Alor Setar), Kuala Lumpur, and Johore (Johore Bahru) and some are exported to Singapore. Local retail markets in Perak include those in Sitiawan, Pantai Remis, Sungai Ular, Kampung Acheh, Telok Intan and Taiping. Rays are more popular in Perak compared to sharks. Most rays are sold in fresh form. Some amounts of ray are processed into dried salted meat.

It is evident that fishers who catch sharks do not practice finning; fishers bring back the whole bodied sharks to the jetties. The prices of fresh sharks and rays and processed products are highly depending on supply and demand, as well as the type of species.

1. INTRODUCTION

This document provides the findings of a study on marketing of shark and ray in states of Perak and Pahang, Peninsular Malaysia. The report is organized as follows: (i) The first section provides the introduction; (ii) the second and third sections explain the problem statement and objectives of the study; (iii) the forth section entails a brief description of the methodology which covers data sources and empirical methods used; (iv) the fifth section discusses the findings of the study with respect to fishers dependency on sharks and rays; and (v) the last section concludes the study.

1.1 General Overview of Fisheries Sector in Malaysia

Fish as major source of animal protein is an important issue of food security in Malaysia. For decades, fish is consumed by most ethnic groups in Malaysia. According to the Ministry of Agriculture and Agro-based Industry Malaysia (2010), consumption per capita in 2009 was 45.1 kg. However, in 2014 consumption per capita was increased to 56.89 kg (Department of Fisheries, 2014).

In 2017, fisheries sector contributed RM15,157.67 million. Major contribution was from inshore fisheries valued at RM9,220.34 million (60.8%) followed by aquaculture with RM3,905.58 million (25.8%), deep sea RM1,598.50 million (10.5%), ornamental fish RM326.95 million (2.2%), inland fisheries RM93.31 million (0.6%) and aquatic plants RM12.98 million or 0.1% (DOFM, 2018). Details are shown in Figure 1.1.

Figure 1.1: Fisheries Value by Sector in Malaysia, 2017 in RM (million) and Percentage

Sources: Department of Fisheries Malaysia, 2018 in press.
Figure 1.2: Trends of Marine Fish Landing by Fishing Gear Group, 1990-2017 (mt)

Sources: Annual Fisheries Statistics, Department of Fisheries Malaysia

Figure 1.2 depicts the trend of total marine fish landing in from 1990-2017 by fishing gears. Throughout the years, the top three fishing gears contributed to marine fish landing are trawl nets, purse seine-fish and, drift and lift nets.

1.2 Landings of Shark and Ray

1.2.1 Landings of Shark and Ray in Malaysia

Sharks and rays are mostly caught as bycatch in many fishing gears especially trawlers and drift nets. According to Ahmad et al. (2014) at least 63 species of sharks and 82 species of rays are recorded in Malaysian waters. However, landings and trades of shark and ray are not recorded at species level but reported in groups simply as ‘shark’ and ‘ray’. In general, sharks and rays in Malaysia only contributed less than 2.3% of total marine fish landing.

Table 1.1 shows the landing of sharks by states between 2000-2016. Three major states recorded highest landing of sharks are Sarawak, Sabah and Pahang. Other states such as Perak, Terengganu and Johore (East Johore) are also important for shark landings. The highest landing is in 2005 with a total of 9,165 mt. Landing trend is fluctuated between 6,000-9,000 mt.
The annual landings of shark and ray increased and fluctuated from 10,792 mt in 1982 to 20,102 mt in 2017. The highest landing is in 2003 at 27,948 mt while the lowest landing is in 1985 at 10,185 mt. This trend is due to the nature of fisheries and sharks and rays are seasonally occurring. Landings of sharks fluctuated from year to year. The highest landing is in 2005 at 9,165 mt. Similar as for shark, landing of rays also fluctuated from year to year. The highest landing is in 2003 with 19,253 mt.
1.2.2 Landings of Shark and Ray in Perak and Pahang

In general, Perak and Pahang recorded the highest landings of shark and ray in Peninsular Malaysia. Figure 1.4 shows landings of shark and ray in Perak between 2010-2017. In 2010, landings of shark and ray is 706 mt and 2,130 mt respectively. However, in 2017 the landing is decreased to 463 mt and 990 mt respectively. The highest landings of shark and ray are 2,144 mt in 2015 and 2,879 mt in 2012 respectively.

Figure 1.4: Trends of Landing of Shark and Ray in Perak, 2010-2017 (mt)

Figure 1.5 shows landings of shark and ray in Pahang between 2009-2017. In 2009, landings of shark and ray are 740 mt and 1,010 mt respectively. However, in 2016 the landing of sharks is decreased to 434 mt while landing of rays slightly increased to 1,117 mt. The highest landings of shark and ray are recorded in 2010 at 1,022 mt and 1,440 mt respectively.
Table 1.3 shows the total landings of shark and ray in Perak by districts from 2010-2017. The grand total in eight years are 24,145 mt. Three main districts with highest recorded landings of shark and ray are Hilir Perak, Larut Matang and Manjung Selatan. Hilir Perak recorded the highest total landings of shark and ray with 10,655 mt followed by Larut Matang (7,523 mt), Manjung Selatan (4,580 mt), Kerian (900 mt) and Manjung Utara with 487 mt. At Hilir Perak, the highest landing of sharks is recorded in 2015 with 904 mt and for rays in 2014 with 1,486 mt. Details are shown in Table 1.3, Figure 1.6 and Figure 1.7.

Table 1.3 shows the total landings of shark and ray in Perak by districts from 2010-2017. The grand record in 2015 with 904 mt and for rays in 2014 with 1,486 mt. Details are shown in Table 1.3, Kerian (900 mt) and Manjung Utara with 487 mt. At Hilir Perak, the highest landing of sharks is of shark and ray with 10,655 mt followed by Larut Matang (7,523 mt), Manjung Selatan (4,580 mt), and Manjung Utara (487 mt).

**Pahang**

Table 1.4 shows the total landings of shark and ray in Pahang at Kuantan, Pekan and Rompin districts from 2009-2016. The grand total throughout the years are 15,008 mt. Kuantan recorded the highest total landings of shark and ray with 6,947 mt followed by Rompin (6,149 mt) and Pekan with 1,912 mt. The highest landing of sharks is recorded at Kuantan in 2010 with 536 mt while the lowest is at Pekan in 2016 with 0.14 mt. However, the highest landing of rays is recorded at Rompin in 2010 with 89.43 mt and the lowest is at Pekan in 2009 with 5.8 mt. Details are shown in Table 1.4, Figure 1.8 and Figure 1.9.

![Figure 1.8: Landing of Sharks in Pahang by Districts, 2009-2016 (mt)](Source: Pahang State Fisheries Office (2009-2016))
1.2.3 Shark and Ray Biodiversity and Resources in Perak and Pahang

Study conducted by Abd. Haris Hilmi et al., (2017) at Larut Matang and Manjung Utara recorded 20 species of sharks from five families and 33 species of rays from nine families. At Larut Matang, 19 species of rays from five families and 14 species of sharks from three families are recorded while at Manjung Utara 14 species of rays from four families and six species of sharks from three families. In terms of percentage from total marine landings, sharks and rays contributed 0.56% and 2.03% in Larut Matang while 0.38% and 1.38% in Manjung Utara respectively.

The most abundant shark species in both Larut Matang and Manjung Utara are Chiloscyllium hasseltii, Chiloscyllium punctatum and Atelomycterus marmoratus while for rays are Neotrygon orientalis, Maculabatis gerrardi, Brevitrygon heterura and Telatrygon zugei. The highest catch per unit effort (CPUE) (kg/days and kg/hauls) for ray species captured by trawl net Zone C in Perak are Neotrygon orientalis followed by Maculabatis gerrardi and Brevitrygon heterura, while for sharks are dominated by Chiloscyllium hasseltii, Chiloscyllium punctatum and Carcharhinus sorrah (Abd. Haris Hilmi et al., 2017).

Yano et al., (2005) reported that most sharks and rays species are landed by trawl nets at Kuantan. Species of sharks recorded are Carcharhinus sorrah, Carcharhinus sealei, Carcharhinus brevipinna, Loxodon macrorhinus, Rhizoprionodon acutus, Sphyra lewini, Atelomycterus marmoratus, Chiloscyllium punctatum, Chiloscyllium plagiosum, Chiloscyllium indicum, Chiloscyllium hasseltii, Hemipristis elongata and Hemigaleus microstoma, while for rays are Rhynchobatus australiae, Brevitrygon imbricata, Brevitrygon heterura, Telatrygon zugei, Pateobatis uarnacoides, Himantura undulata, Himantura uarnak, Himantura leoparda, Maculabatis gerrardi, Pateobatis jenkinsii, Maculabatis fai, Maculabatis pastinacoides, Pastinachus spp, Taeniura lyamma, Taeniura meyeni, Gymnura japonica, Gymnura poecilura, Gymnura zonura and Rhinoptera javanica.
1.3 Marketing of Shark and Ray in Perak and Pahang

In general, all other parts of shark and ray are fully utilised such as meat, fins, cartilage, skin, as well as jaws. A small number of shark's jaws are sold as rare souvenir items to enthusiasts in both states. Discarded parts such as head are used as bait for fish/crab traps and aquaculture. There are no shark and ray processing plants in both states. This is due to irregularity in supply of the raw materials. Sharks and rays processing are usually carried out as a cottage industry, mostly by the families of fishers.

Both shark and ray meat are sold either fresh, salted or dried. Small sharks are sold fresh and meat of large sharks are mostly salted and sun dried. In other hand, rays are mostly sold fresh and small species such as *Brevitrygon imbricata*, *Brevitrygon heterura* and *Telatrygon zugei* are salted and sun dried. Skin of rays especially *Maculabatis gerardti* are preserved and exported to Thailand. Large sized sharks and rays such *Carcharhinus sorrah*, *Carcharhinus leucas*, *Carcharhinus amblyrhyynchus*, *Sphyra lewini*, *Sphyra mokarran*, *Rynchobatus australiae* and *Rhina ancylostoma* are sold with fins cut off at the landing site.

The utilisation, price and market destination of shark and ray are almost similar throughout the study duration. Once sharks and rays are caught by fishers they are brought back as a whole to the landing sites. The prices of fresh sharks and rays range accordingly by per kg depending on various factors such as species, size and season.

This research in Perak and Pahang is focused on; identifying the key industry participants: fishers, wholesalers, distributors, agents, processors, exporters, retailers, institutional buyers and consumers; to identify the major landing sites for shark and ray; to identify type of products; and to outline the marketing practices and supply chain of shark and ray.

2. PROBLEM STATEMENT

Malaysia has developed a National Plan of Action for sharks (NPOA-Shark) in 2006 in line with the requirement of the International Plan of Action for Conservation and Management of Shark (IPOA-Shark) by FAO in 1998 (Department of Fisheries Malaysia, 2006). The NPOA-Shark contains seven major items. They are: biology and habitat, socio-economic aspects of fishers and middlemen, trade, consumption of shark and ray, capacity building and research coordination, increasing awareness through information, conservation and effective management of shark and ray. The first NPOA-Shark has been revised in 2014 taking into account of the suggestions made by the IPOA-Shark after the document was evaluated on its achievement (Department of Fisheries Malaysia, 2014). According to IPOA-Shark, all the seven items under NPOA-Shark 2006 have been addressed but sections on the socio-economics profile of the fishers and middlemen requires further empirical evidences as well as on trade issues. Extended studies have been proposed by Department of Fisheries Malaysia (DOFM) to fill the knowledge gap namely for domestic utilisation, marketing of shark and ray in Perak and Pahang for Peninsular as representation of market flows for shark and ray.

The evidences on trade trends and competitiveness provide an indication of the extent of commercialization activities of this commodity in Malaysia in comparison to its trade partners in the ASEAN region. Profiling the middlemen, their marketing activities and practices are crucial to indicate the economic roles of each type of middlemen along the supply chain and the value creation made on the products respectively. This information are indicators of the commodification and marketization of shark and ray in Malaysia, the major players, value added activities, the roles of
prices on the supply and demand of shark and ray products and consumer preferences. They are valuable input towards designing a sustainable development of shark and ray from all angles: production, utilisation, supply, demand, market and resource management.

To ensure the effectiveness of conservation and management for shark and ray populations in the face of fisheries production and competition for natural resources, countries must be accountable for what they consume rather than what they produce.

3. OBJECTIVES

The overall objective of the study is to examine the domestic marketing of shark and ray products in Perak and Pahang. The sub-objectives are:

i. To identify the major actors in the marketing of shark and ray in selected areas of Perak and Pahang; and

ii. To examine the shark and ray marketing channels and practices in selected areas in Perak and Pahang.

4. METHODOLOGY

The following section describes the methodologies applied to achieve the above objectives. The methods used to answer these objectives were Key Informant Survey (KIS), Focus Group Discussion (FGD) and supply chain analysis.

Data on the marketing of shark and ray are collected through “key informant surveys” or KIS and “focus group discussions” or FGD with relevant stakeholders who are involved in the activities. KIS is a qualitative in-depth interview with individuals who know what is going on in the community. In this study, the purpose of KIS is to collect information from a wide range of individuals including community leaders, traders, officials, prominent fishers, village heads who have first-hand knowledge about the fisher community and market. An FGD is a small group of 6-10 individuals led through an open discussion by a skilled moderator. The group is large enough to generate a rich discussion but not too large that some participants are left out.

2https://assessment.trinity.duke.edu/documents/How_to_Conduct_a_Focus_Group.pdf
The stakeholders involved in both the KIS and FGD are: fishers, small time traders, wholesalers, processors, retailers (including restaurants and medicinal shops) and exporters. The study selected landing centres in Perak (including Hilir Perak, Ipoh, Larut Matang, Bagan Panchor, Pantai Remis, Lumut and Pangkor) and in Pahang (including Kuantan, Balok, Beserah, Kuala Pahang, Nenasi and Rompin).

For Perak, this study included four of the five fisheries districts which are Hilir Perak, accounting for 44.1% of shark and ray landings in 2017, Larut Matang (31.2%), Manjung Selatan (19.0%) and Manjung Utara (2.0%) (Department of Fisheries Perak, 2017). On the other hand, for Pahang, all districts are included which are Kuantan, accounting for 46.3% of shark and ray landings, Rompin (41.0%) and the balance from Pekan (12.7%).

The FGD questions used in the interviews of the stakeholders are provided in Appendix 8.2. A supply chain framework was used to guide the discussion and information seeking. The study ensured that major marketing functions were covered. These functions included: exchange (buying, selling and storage), physical (transportation, processing and standardization) and facilitating (risk bearing, financing and market intelligence). Major players along the supply chain and product development are identified and observed accordingly from the landing centres until the products reached the final destinations as reported by the stakeholders. To capture the differences in the marketing network between localities, a case study\(^3\) approach is adopted for the locality and specific firm chosen.

5. RESULTS OF SHARK AND RAY MARKETING SUPPLY CHAIN

5.1 Marketing of Shark and Ray Products

During our visit, the main product that can be generated from shark and ray is shown in Figure 5.1 for both Perak and Pahang. The market is the main centre to buy fresh products of sharks and rays for local consumption. Shark products are sold in several forms such as fresh or salted meat, dried fin, fresh and frozen shark meat, skin, teeth, cartilage and fish ball. All prices are set at the retail market level. Most Malaysian shark product traders have multiple roles including processing, delivering and selling the products to the local markets. For example, livers are used either for food and sold fresh; skins are used for leather production as handbag, wallet, belt, shoes but processed outside Malaysia. However, they also have a number of retailers that reported to have a leather factory at Johore. Furthermore, some parts of shark and ray are used to produce souvenirs in different styles and leftover or discarded parts of the fish such as heads and other internal organs are used to supply fishmeal factory or as bait for fish and crab traps. Both states reported that sharks and rays are fully utilised.

\(^3\) “Case study” is defined as an in-depth investigation of a single individual, group or event to explore the causes of underlying principles (http://www.pressacademia.org/case-studies/definition-of-case-study)
5.2 Marketing Channels of Shark and Ray

Based on the focus group discussions with major actors in the marketing of shark and ray in selected areas in Perak and Pahang, the general marketing channels for shark and ray are depicted in Figure 5.2 to Figure 5.4. Shark traders in Perak and Pahang bought or collected fish directly from the fishers and sold either to local markets or to markets in Penang, Johore, Melaka, Kuala Lumpur and a few other states.

Figure 5.2 shows the summary of shark and ray market channels in Perak from fishers to consumers. The market flow involves a few intermediaries from fishers, wholesalers, fishmongers or retailers (involved in logistic transportation service) to consumers. In this study, researchers have identified four fishers in Bagan Panchor who are targeted catching rays only using longlines, trawlers who have high landings of by-catch sharks, two marine product processors in Ipoh and several retailers selling dried shark and ray products at Manjung. According to Abdul Haris Hilmi et al., (2017), the highest landing of shark by species are Chiloscyllium hasseltii, C. punctatum, Atelomycterus marmoratus, Atelomycterus cf. ermanni and Carcharhinus sorrah. Other shark species such as Carcharhinus brevipinna, C. limbatus, C. leucas and Galeocerdo cuvier are only landed between 1-2 months. The most common and abundant ray species are Neotrygon orientalis, Maculabatis gerrardi, Brevitygon heterura, Telatrygon zugei, Rhynchobatus australiae, Maculabatis pastinacoides and Hemitrygon akajei. All these species are landed throughout the year. Other ray species such as Dasyatis thetidis, Himantura undulata, Rhinobatos cf. borneensis and Rhynchobatus laevis are only landed between 1-3 months.

At the landing sites, fishers sell to either wholesalers or fishmongerers the whole body of sharks with fins still attached at RM5/kg to RM10/kg regardless of it sizes. At the landing sites, buyers (wholesalers) determined the price of fish; nonetheless, price may vary according to the weather, moon position and season. Normally at the landing site wholesalers cut the body parts of big size sharks into pieces at the landing site before selling to retailers or direct to consumers. Price margin.
of shark and ray that retailers usually pay to wholesalers is RM2/kg. Consumers, on the other hand, paid a retail price of between RM15/kg to RM18/kg if they bought at the fish market. Several wholesalers collected semi-processed ray skins which are sent to agents for exportation to Thailand.

Figure 5.3 shows the summary of shark and ray marketing in Pahang, overall market identity includes fishers, first level wholesalers and second level wholesalers. Most of the small size fishes are sold at the landing jetty itself, while the big size fishes are sent to Kuantan wholesalers. Several main first level wholesalers are operating at each jetty in Kuantan, Balok, Beserah, Kuala Pahang, Nenasi, Rompin and Endau-Rompin. Those first level wholesalers who have their own fishing vessels will also accept landings from other boats or vessels before sending all fishes to second level wholesalers. All transactions are paid in cash. There are two processors of dried fish products in Beserah, Kuantan, who bought the big sized sharks to be made into dried salted meat. The processors sell the products to small retailers at wholesale with price of about RM20/kg and the retailers will repackage and resell the salted meat at retail level for RM5/100 gram. In Kuala Pahang, Nenasi and Rompin, all shark and ray landings are taken up by the two first level wholesalers who will send the fishes mostly to Kuala Lumpur, Melaka, Johore and Singapore markets. The wholesalers also employed workers to collect partially processed ray skins which are then sent to a collector in Kuala Lumpur who then will export the skins to Thailand market. The wholesalers are responsible to charge and estimate the price of which is estimated at RM3,000/fish box. The price of the ray skins depends on the sizes and type of species. In Pahang, all shark and ray products including raw meat, salted meat, livers, skin and left over shark head are utilised.

Figure 5.4 shows the flow of supply and demand of shark and ray for the two second level wholesalers in Batu Pahat. The two second level wholesalers collected all types of fishes including shark and ray from a few landing locations for distribution to various markets. It is reported that shark and ray are normally collected from eight first level wholesalers in Terengganu (at Besut, Dungun and Kemaman), 11 first level wholesalers in Pahang (at Kuantan, Kuala Pahang, Nenasi, Sg. Miang and Rompin), one each from Tg. Balai, Indonesia (for low grade rays) and Bintulu, Sarawak (for Pastinachus stellurostris (Pari Daun) species). The distribution to retail markets in Melaka, Muar, Kuala Lumpur, Johore Bahru and Singapore depended on demand for specific species and types of products of shark and ray. The transportation of shark and ray products may be done by either logistic transport operators or by the second wholesalers themselves using their own transport vehicles. The costs of transportation are ranged between RM20-RM30 per box. The second level wholesalers in Batu Pahat usually prefer to take unprocessed whole body fish.

    - <5kg=RM11/kg
    - 5-10kg=RM8.50/kg
    - 10kg>RM7.50/kg

    - 1-18kg

  - *Shark skin at Batu Pahat sold around RM20-RM25/kg*

- **INDONESIA**
  - Received rays from Tanjung Balai around 200kg, not fresh as Malaysia, the price between RM7-8/kg

  - *Rays: Pastinachus stellurostris* (Pari Daun): 18kg and above

  - *Rays: Aetomylaeus nichofii* (Pari Lang/Burung)
    - <5kg=RM11/kg
    - 5-10kg=RM8.50/kg
    - 10kg>RM7.50/kg

- **SARAWAK**
    - 1-18kg

  - *Rays (Maculabatis gerrardi)*
    - Grade A:
      - 1-3kg (RM23/kg)
      - 3-8kg (RM18/kg)

- **Melaka**
    - 18kg and above

  - *Shark skin at Batu Pahat sold around RM20-RM25/kg*

  - *Shipment: AirAsia Cargo RM10 (36kg); 3 times/week*

  - *Transportation Service cost to KL, Melaka and Singapore Charge RM20/box*

- **Kuala Lumpur**
    - 1-18kg

- **Muar**

- **Johore Bahru**

- **Singapore**

Figure 5.4: Shark and Ray Marketing Channels of Second Level Wholesalers in Batu Pahat
6. CONCLUSION

This study aims to examine the domestic marketing of sharks and rays in Pahang and Perak as a continuation of a similar study in Sabah. Both states are the major producers of shark and ray products in Peninsular Malaysia. Therefore, the study examines major players in the system, marketing channels and practices.

Data for the study are collected through the Focus Group Discussions (FGD) and Key Informant Survey (KIS) at major landing sites in both states. Face to face interviews are carried out to collect the relevant data related to the traditional fishers.

The findings of the KIS and FGD surveys have found that almost all fishers indicate that sharks and rays are "by-catch" and the landings are considerably small, with its marketing system seen to operate with a relatively efficient routine. The results reflect that markets for shark and ray in both states are mostly localised depending on the landings (weight and species) and the local demand.

In Pahang, sharks are consumed by local consumers in various forms. The central market for sharks and rays in Pahang is Kuantan where the products are distributed through wholesalers to local markets as well as markets outside the state including Melaka, Johore (Batu Pahat and Johore Bahru), Kuala Lumpur and Singapore. There are two processors of shark and ray products based in Beserah, Pahang. Both processors also export ray skins to Thailand through an agent based in Perak.

Whereas in Perak, the market system is even more direct where the wholesalers collect the fishes at the landing sites and sell most of them directly to the retailers. Major retailing markets are within the state itself such as in Sitiawan, Pantai Remis, Sungai Ular, Kampung Acheh, Telok Intan and Taiping. Out of state markets include those in Butterworth, Bukit Mertajam, Alor Setar, Kuala Lumpur, Johore Bahru, Batu Pahat and Selayang, Selangor and rays are also exported to Singapore.

Market players in the two states seem to have a good marketing network to communicate supply and prices. Most of the wholesalers have the storage facilities to keep fresh fish for distribution to major internal market destinations. In general, most of the sharks and rays are consumed locally in the fresh form. However, some small scale factories produce various value added products such as dried cartilage of sharks, shark jaws and salted-dried meat. The demand for sharks and rays in both states for local consumptions are relatively strong.

The findings from this study would be useful as a guideline in expanding similar studies in other states in Malaysia. It is hoped that the findings would provide the evidential input for policy decision and action as required by the National Plan of Action for Conservation and Management of Shark-Plan 2 (NPOA-Shark Plan 2).

8.2 FGD Question for Focus Group Discussion on Domestic Marketing of Shark and Ray

Perbincangan Kumpulan Fokus PKF (Nelayan)

Topik perbincangan:
1. Sila terangkan operasi/kegiatan perikanan di komuniti anda.
   - Status pemilik (pemilik bot, teknong/awak-awak)
   - Lesen bot & Perkakasan yang kerap digunakan (cth: pancing, rawai, pukat tangsi, pukat tunda)
   - Pangkalan digunakan
   - Pemilihan lokasi/kawasan menangkap ikan (jarak daripada pangkalan-batu nautika)
   - Bilangan hari bagi setiap trip & bilangan trip sebulan
   - Kuantiti dan nilai pendaratan setiap trip secara keseluruhan (kg & RM)
   - Hasil tangkapan utama (target spesies)
   - Musim atau bulan penangkapan, bilakah hasil penangkapan tinggi/kurang di kawasan anda?
   - Aktiviti lain (selain perikanan) yang menyumbang kepada pendaratan bulanan.

2. Bagaimanakah aktiviti penangkapan ikan yu dan pari dijalankan?
(soalan akan ditanyakan berasingan bagi yu dan pari)
   - Kekerapan menangkap ikan yu dan pari seminggu (per trip)
   - Ditangkap sebagai spesis sasaran atau tertangkap (by catch)
   - Adakah terdapat kawasan penangkapan tertentu bagi yu dan pari (dapatkan nama lokasi) dan bagaimana anda mengetahui lokasi ini?
   - Jarak lokasi penangkapan dari pangkalan (batu nautika)
   - Adakah gangguan yu dan pari bermusim? Jika Ya, bilakah musim penangkapan tertinggi/terendah
   - Jenis spesies yang ditangkap dan spesies yang paling kerap ditangkap
   - Saiz yu dan pari yang ditangkap (cth: kecil, sederhana atau besar)
   - Adakah yang ditangkap hanya diambil sirip atau di daratkan keseluruhan badan berserta sirip
   - Adakah anda mempunyai perjanjian kontrak dengan pembeli? Jika Ya, sila terangkan
   - Adakah semua spesies yang didaratkan boleh dijual? Adakah terdapat spesifikasi spesies yang diminta oleh pembeli?
     - Adakah anda melepaskan kembali ikan yu ke laut jika spesies berkenaan tidak laku
     - Adakah anda mempunyai perjanjian kontrak dengan pembeli? Jika Ya, sila terangkan
   - Adakah anda menyediakan dan memproses ikan ini sebelum dijual/dipasarkan (Ya/Tidak)
   - Adakah semua spesies yang didaratkan boleh dijual? Adakah terdapat spesifikasi spesies yang diminta oleh pembeli?
     - Adakah anda melepaskan kembali ikan yu ke laut jika spesies berkenaan tidak laku
     - Adakah anda menyediakan dan memproses ikan ini sebelum dijual/dipasarkan (Ya/Tidak)
   - Faktor pemilihan lokasi penjualan/pemasaran ikan yu/pari
   - Adakah terdapat pembeli yang khusus membeli ikan yu dan pari sahaja

3. Bagaimanakah permintaan dan pemasaran bagi pendaratan ikan yu dan pari di kawasan anda?
   - Adakah pendaratan yu dan pari untuk kegunaan sendiri/menggunakanannya untuk menghasilkan produk sendiri?
   - Kepada siapakah anda menjual hasil tangkapan anda (cth: pemborong/peraih/kilang/pusat pemasaran)
   - Adakah anda mempunyai perjanjian kontrak dengan pembeli? Jika Ya, sila terangkan
   - Adakah anda menyediakan dan memproses ikan ini sebelum dijual/dipasarkan (Ya/Tidak)
   - Adakah semua spesies yang didaratkan boleh dijual? Adakah terdapat spesifikasi spesies yang diminta
   - Faktor pemilihan lokasi penjualan/pemasaran ikan yu/pari
   - Adakah terdapat pembeli yang khusus membeli ikan yu dan pari sahaja
Perbincangan Kumpulan Fokus PKF (Pengantara Pasaran)

Kata-kata aluan

1) Pengenalan penyelidik.
2) Latar belakang penyelidikan
   - 3 komponen, objektif, dll
   (lihat Ringkasan Penyelidikan)
4) Latar belakang peserta
   - nama, aktiviti terlibat dan sebagainya.

Topik perbincangan:
1. Latar belakang responden
   - Adakah anda seorang peraih/pemborong/penjual/restoran/kilang? (sila pilih)
   - Berapa lamakah anda terlibat di dalam aktiviti ini?
   - Bilangan pekerja dan jenis pekerja (tempatan/asing)
   - Jenis produk (cth: produk kering, beku dan basah)

2. Sila terangkan operasi/kegiatan pembelian yu dan pari.
   - Dimanakah anda mendapatkan sumber bagi yu dan pari, melalui pasaran tempatan (nelayan di jeti/ejen/perdagang daerah lain) dan/atau import
   - Jeti tempatan yang dikunjungi bagi mendapatkan sumber (nama jeti)
   - Jenis pembekal terlibat (nelayan tradisi, nelayan komersil (pukat tunda), pemborong, peraih, dll)
   - Adakah anda mempunyai perjanjian/kontrak dengan penjual/pembekal
   - Selain anda berapa ramai pembeli lain yang terdapat di jeti/pusat pembelian?
   - Adakah anda mempunyai permintaan tertentu bagi pemilihan pembelian bekalan (cth: spesies, saiz, dll)
   - Adakah anda membeli bekalan secara kerap atau bermusim? Jika bermusim, bulan berapakah dikira sebagai bulan penjualan tertinggi/terendah bagi produk yu dan pari?
   - Bolehkah anda nyatakan kuantiti dan nilai pembelian yu dan pari? Sekiranya kerap, sila nyatakan dalam anggaran belian bagi seminggu/sebulan (kg & RM)
   - Bolehkah anda menganggarkan amaun/bahagian (dalam kuantiti/nilai atau %) pembelian bekalan yu dan pari berbanding bekalan produk lain.
   - Kekerapan anda menambahkan/mendapatkan stok bagi ikan yu dan pari dalam masa seminggu
   - Adakah anda pembeli tunggal yang membeli ikan yu dan pari di kawasan anda.
   - Bagaimanakah anda membuat keputusan bagi memenuhi keperluan anda (permintaan pasaran)
   Cth: Memiliki bot nelayan sendiri; menyediakan pangkalan pendaratan dan lain lain

   - Siapakah pembeli dan dimanakah produk yu dan pari anda dijual
   - Sila nyatakan spesies yu dan pari yang dijual?
   - Bolehkah anda nyatakan julat/range kuantiti dan nilai jualan? Jika kerap, sila nyatakan dalam anggaran belian bagi seminggu/sebulan (kg & RM)
   - Bolehkah anda menganggarkan amaun/bahagian (dalam kuantiti/nilai atau %) penjualan yu dan pari berbanding penjualan produk lain.
   - Bagaimanakah anda menentukan harga dan gred bagi produk jualan anda? (mengikut spesies dan saiz)
   - Adakah pembayaran dibuat secara terus atau mengambil masa? Jika mengambil masa, biasanya berapa lama?

4. Pemasaran dan pemprosesan produk jualan yu dan pari?
   - Bahagian ikan yang dijual (cth: isi ikan, kulit, sirip, gigi, insang, tulang, hati, dll)
   - Berapa peratus bahagian yang dijual selepas diproses
   - Destinasi penghantaran produk jualan mengikut bahagian ikan yang diproses (cth: pasar borong (luar sabah), pasar basah, kedai barangan kering, restoran, kilang pemproses, dll)
   - Kaedah penghantaran produk (cth: lori, kargo, dll) dan kekerapan penghantaran
   - Factor yang mempengaruhi harga dan gred jualan
     ✓ Spesies, saiz, musim, dll
   - Bagaimanakah harga dan gred jualan ditentukan (perundingan, ditentukan oleh pembeli, dll)
   - Apakah julat/range harga dan gred jualan yu dan pari (mengikut spesies dan saiz)
   - Adakah anda dibayar secara terus semasa penjualan atau selepasnya? Tempoh masa?
   - Adakah pendaratan dan penjualan yu atau pari menyumbang kepada pendapatan anda (banyak/sedikit)

4. Adakah anda mengetahui peraturan berkaitan ikan yu dan pari (dari segi penangkapan, penjualan, dll)?
   Sila nyatakan peraturan yang anda tahu dan apakah pandangan anda.

5. Sekiranya kerajaan melaksanakan larangan penangkapan ikan yu, adakah peraturan ini akan memberi kesan pada anda? Jika Ya, sila terangkan dalam bentuk apa?

6. Adakah anda mengetahui aktiviti penyiripan ikan yu di laut (melibatkan penyiripan dan membuang badan di laut) adalah dilarang? Apakah pandangan anda berkaitan praktis dan larangan ini?
Kata-kata aluan
1) Pengenalan penyelidik.
2) Latar belakang penyelidikan – 3 komponen, objektif, dll – (lihat Ringkasan Penyelidikan)
4) Latar belakang peserta – nama, aktiviti terlibat dan sebagainya.

Topik perbincangan:
1. Latar belakang responden
   • Adakah anda seorang peraih/pemborong/penjual/restoran/kilang? (sila pilih)
   • Berapa lama anda terlibat di dalam aktiviti ini?
   • Bilangan pekerja dan jenis pekerja (tempatan/asing)
   • Jenis produk (cth: produk kering, beku dan basah)

2. Sila terangkan operasi/kegiatan pembelian yu dan pari.
   • Dimanakah anda mendapatkan sumber bagi yu dan pari, melalui pasaran tempatan (nelayan di jeti/ejen/perdagang daerah lain) dan/atau import
   • Jeti tempatan yang dikunjungi bagi mendapatkan sumber (nama jeti)
   • Jenis pembekal terlibat (nelayan tradisi, pemborong, peraih, dll)
   • Selain anda berapa ramaikah pembeli lain yang terdapat di jeti/pusat pembelian?
   • Boholah anda nyatakan kuantiti dan nilai pembelian yu dan pari? Sekiranya kerap, sila nyakan dalam anggaran belian bagi seminggu/sebulan (kg & RM)
   • Boholah anda menganggarkan amaun/bahagian (dalam kuantiti-nilai atau %) pembelian bekalan yu dan pari berbanding bekalan produk lain.
   • Kekeperluan anda menambahkan/mendapatkan stok bagi ikan yu dan pari di kawasan anda.
   • Bagaimanakah anda membuat keputusan bagi memenuhi keperluan anda (permintaan pasaran) Cth: Memiliki bot nelayan sendiri; menyediakan pangkalan pendaratan dan lain lain

   • Siapakah pembeli dan dimanakah produk yu dan pari anda dijual
   • Sila nyatakan spesies yu dan pari yang dijual?
   • Boholah anda nyatakan jualan/kuantiti dan nilai jualan? Jika kerap, sila nyakan dalam anggaran belian bagi seminggu/sebulan (kg & RM)
   • Boholah anda menganggarkan amaun/bahagian (dalam kuantiti-nilai atau %) penjualan yu dan pari berbanding penjualan produk lain.
   • Bagaimanakah anda menentukan harga dan gred bagi produk jualan anda? (mengikut spesies dan saiz)
   • Adakah pembayaran dibuat secara terus atau mengambil masa? Jika mengambil masa, biasanya berapa lama?

4. Pemasaran dan pemprosesan produk jualan yu dan pari
   • Bahagian ikan yang dijual (cth: isi ikan, kulit, sirip, gigi, insang, tulang, hati, dll)
   • Berapa peratus bahagian yang dijual selepas diproses
   • Destinasi penghantaran produk jualan mengikut bahagian ikan yang diproses (cth: pasar borong (luar sabah), pasar basah, kedai barangan kering, restoran, kilang pemproses, dll)
   • Kaedah penghantaran produk (cth: lori, kargo, dll) dan kekerapan penghantaran
   • Faktor yang mempengaruhi harga dan permintaan
5. Berapakah kos yang diperlukan/terlibat bagi tempoh sebulan?
   • Apakah major kos operasi yang terlibat bagi aktiviti anda? Sila nyatakan amaun dan bahagian terlibat (cth: pembelian bekalan, upah pekerja, pemprosesan, pengangkutan, utiliti, dll)
   • Apakah major kos tetap yang terlibat? (cth: sewa bangunan dan peralatan, insuran, lesen perniagaan, dll)
   • Kos pemasaran terlibat? (cth: kos kargo/penghantaran, upah agensi pemasaran, dll)

6. Adakah anda mengalami masalah sepanjang menjalankan aktiviti perdagangan ikan yu dan pari.

7. Adakah anda mengetahui peraturan berkaitan ikan yu dan pari (dari segi penangkapan, penjualan, dll)? Sila nyatakan peraturan yang anda tahu dan apakah pandangan anda.

8. Sekiranya kerajaan melaksanakan larangan penangkapan ikan, adakah peraturan ini akan memberi kesan pada anda? Jika Ya, sila terangkan dalam bentuk apa?

9. Adakah anda mengetahui aktiviti penyiripan ikan yu di laut (melibatkan penyiripan dan membuang badan di laut) adalah dilarang? Apakah pandangan anda berkaitan praktis dan larangan ini?
